

Health Information Management

Moving Data from Information to Communication

Modern and efficient information systems are vital for success in the Health and Health Information Technology fields. "Segue Health" understands the unique challenges faced by health organizations in the Federal, Commercial, and Non-profit markets. We focus on delivering custom applications and Enterprise data management support through a consultative approach, working as a partner to the organizations we support.

We provide our clients with a range of services, to include:

SYSTEM
INTEGRATION

CUSTOM WEB,
MOBILE & TABLET
DEVELOPMENT

DATA QUALITY,
CONVERSION, &
MIGRATION

Our solution design has a business-process focus that helps to connect patients with providers, providers with the greater health IT community, and the federal government with key stakeholders.

Data Quality, Conversion, and Migration

To promote the developing S&I Framework and Model-Health Driven Tools, website, and wiki-spaces to the user community, we support strategic documentation, marketing, and communications. Tenets of our approach include:

- Identify the business processes and the critical/clean data for migration
- Security and protection of personal information is paramount
- Ensure data flows accurately across the enterprise
- Establish data standards and define metrics to drive improvement

Mobile Application Development

Mobile Applications provide new capabilities and efficiencies, and augment existing web-based systems. Their functional possibilities are limited only by the ability to identify new and creative uses. **Our Mobile Application development support includes:**

- Design concepts, development, and release support
- Extending existing enterprise system capabilities to handheld devices
- Native application development for iOS and Android operating systems
- Mobile web site development using HTML5
