# SEGUE/// ®
TECHNOLOGIES

Application Development

Segue Technologies® provides full-service Website and Web Application development - from business process analysis to solution implementation and maintenance. We create attractive, modern, and easy to use interfaces. As a custom software development company, we strive to understand and model our customer's businesses processes. Segue has been developing Websites and Web Applications since 1997. We apply the experience gained from each project to the next and we look forward to each new challenge we undertake.

We specialize in the modernization and redesign of aging applications which need to support growing user communities. We work with defense customers to enhance mission-critical systems, non-profits to create efficient and accessible tools, and commercial businesses that seek to promote their brand and increase their sales in competitive markets.

The Segue Process Framework

PHASE 1	PHASES 2 - 4	PHASE 5	PHASE 6
PLANNING	Development Testing Requirements	DELIVERY	MAINTENANCE

Our development methodology, the Segue Process Framework (SPF), adapts to the scope of the project and the technologies which best suit our customers' requirements. The SPF is iterative and flexible, allowing it to support changing project and business needs. The applications we develop are designed per user-centric principles and validated through our CMMI (Capability Maturity Model Integration) appraised Quality Control service.

RECOGNITION:

CMMI DEV /3 SM
Exp. 2017-05-02 / Appraisal #21974
